

BDA400 Assignment 6

Technical Analysis using R, Visualization Phase

STUDENT	Sunny Khurana
STUDENT ID	664425271
COURSE	BDA400 / Data Science Tools and Techniques
WEIGHT	15%

PROJECT DESCRIPTION

This project is an R Shiny portfolio dashboard that retrieves historical stock data from Yahoo Finance with quantmod, provides a deterministic offline fallback for reproducibility, and visualizes price data as line, candlestick, or area charts. Users can select Daily, Weekly, or Monthly timeframes, configure moving-average periods, toggle Moving Averages, RSI, and MACD price-chart layers, and review every Buy, Sell, or Hold observation.

ASSIGNMENT REPOSITORY

<https://github.com/sunny-khurana-26/TechnicalAnalysis/tree/main/Assignment%206%20-%20Technical%20Analysis%20Using%20R%20Visualization%20Stage>

Public repository path matches the code and PDF package.

INCLUDED IMPLEMENTATION

app.R contains the complete Shiny application. README.md documents installation, launch, data retrieval, fallback behavior, indicator definitions, trading rules, and current runtime validation findings.

R 4.2.3/Shiny runtime checks passed; Yahoo request fell back on DNS failure.

Prepared for Assignment 6 submission
